

GEiCam

spanish breast
cancer group

GEICAM simplifies and streamlines TMF Management with Trial Interactive's eTMF and TMF-related services and support.

ABOUT GEICAM

Having been active for more than 27 years, GEICAM has become the **leading academic group in clinical, epidemiological, and translational breast cancer research** in Spain. It is also highly recognized at an international level.

THE CHALLENGE

Given the large clinical trials conducted by GEICAM at a global level, document collaboration and compliance were key aspects of its day-to-day operations. For GEICAM, it was critical to have a transparent TMF pulse with metrics such as completeness and timelines along with the ability to control TMF quality anytime, anywhere.

TRIAL INTERACTIVE SOLUTION

TransPerfect's Trial Interactive eTMF was implemented to easily and quickly support upcoming studies. TMF study setups are nowadays ready in less than four weeks, and, by following an owned TMF Reference Model in all studies, GEICAM achieved TMF management standardization, which reduced project management time by 50%. Through the quality review module in Trial Interactive, GEICAM is able to control its owned TMF health periodically and in a compliant way.

TransPerfect President and CEO
Phil Shawe commented,

"TransPerfect is proud of partnering with a leading academic group such as GEICAM. TransPerfect has also a history of supporting cancer research, and we are honored to assist GEICAM in its important mission of saving more lives every day."

Gema Sanz,
Head of Clinical Operations
at GEICAM, added,

"As collaboration is an important element of GEICAM's organization, we needed a partner who could be flexible and adapt to our specific needs. We chose Trial Interactive because TMF experience and support are key to helping us scale and guide, and TransPerfect offers the best of both."
